Compact transducer with proven conductive-plastic technology.

The model with push rod and ball coupling enables a backlash- and lateral force-free operation even with parallel and angular displacement of transducer and measuring direction. Characteristic for the robust design is the double-sided support of the actuating rod. For the spring-loaded type, this bearing allows high lateral forces on the tip of the rod which may occur during scanning of cams or wedge plates.

The connection of these potentiometric series is done at a high impedance voltage input or via signal conditioner.

Applications

- Measuring / control technology
- Manufacturing Engineering
 - Woodwork machines
 - Riveting machines
 - Packaging machines
 - Welding machines
- Assembly / Test devices
- Medical appliances
