

MAIN FEATURES

ø 80 encoder series recommended in feedback control systems on AC servomotors. They include a traditional incremental encoder and the Hall effect phases.

- Small dimensions
- Wide resolution range available
- High temperature resistant
- Easy mounting

EH series

Basic version with incremental outputs.
Several output types available.

EF series

Optic generation of "Hall effect phases" added to the basic version.
Signal transmission by parallel bus.

EH - EF 80 P

HOW TO MOUNT IT

- Fix the anti-rotation pin (P).
- Insert the encoder on the motor shaft with misalignment recovery system corresponding to the pin (P).
- Screw the nut (D) (don't tighten it if you need to phase zero signal).
- Couple the encoder shaft with the motor shaft, making sure the pin (P) is inserted in the hole of the misalignment recovery system (R).
- Fix the encoder shaft with the two M4 grub screws.
- For zero phasing turn the encoder (22° max.), then screw the nut (D).
